

Risk assessment data processing

Version: 20220214

Supplier	Amazon AWS
What we store	All personal information about users, clients, speakers, exhibitors
Geo location of data	Dublin, Ireland
Type of data	<ul style="list-style-type: none"> ● Name ● Email ● Phone ● Address ● Pictures ● documents ● Video ● Audio ● User logs ● Chat logs ● News Feed/timeline entries ● Statistics about use ● Geolocation information <p><i>In some events also information about:</i></p> <ul style="list-style-type: none"> ● Allergies ● Personal id number
Reason for use	Needed to make the system work - this is our main infrastructure.
Risk of transfer to countries outside EU / EEC	Amazon AWS is a USA registered company, but all data from tappin are stored on servers in Dublin, Ireland. As Tappin never uses support from AWS in USA or any other part of the world, the risk of unauthorized transfer of data outside of EU/EEC is minimal. More information about this under documentation below.
Other risks	There is always the risk that someone can break into the system, but this risk is minimal and the implication regarding personal data is very low.
Summary	AWS is an industry leader in these kind of services and are used by anything from small to international large companies throughout the EU/EEC and are considered to be a safe supplier.
